

SALES DATA ANALYSIS REPORT (2020-2022)

Prepared by: Onyemere Sandra

Course: Data Analytics

Project: Sales Data Analysis Using Microsoft Excel and Microsoft Power BI

Tools Used: Microsoft Excel, Microsoft Power BI, Microsoft Word

Date: July 2026

Introduction

This report presents a sales data analysis for the period 2020–2022 using Microsoft Excel and Microsoft Power BI. The project aims to analyze sales performance, identify trends, evaluate key performance indicators (KPIs), and generate actionable insights that support data-driven business decisions. Microsoft Excel was used to analyze the data and prepare the reporting dashboard, while Microsoft Power BI was used to create an interactive dashboard for presentation.

Objectives

- Analyze sales performance from 2020 to 2022.
- Compare revenue across different regions.
- Evaluate the cost of goods sold.
- Analyze gross profit trends.
- Identify high-performing and low-performing regions.
- Provide recommendations for improving business performance.

Key Performance Indicators (KPIs)

Total Revenue	\$29.1 Million
Cost of Goods	\$11.7 Million
Gross Profit	\$17.3 Million
Total Customers	10,281
Product Returns	46,734
Total Quantity Sold	13,726,397

Dashboard Analysis

Revenue by Region

North West generated the highest revenue among all regions, while Central West recorded the lowest revenue.

Cost of Goods by Region

North West also had the highest cost of goods, reflecting its high sales volume. Central West recorded the lowest cost of goods.

Gross Profit vs Revenue by Year

Revenue and gross profit increased significantly in 2021, making it the best-performing year. Although both declined slightly in 2022, performance remained stronger than in 2020.

Quantity by Region

North West contributed the highest percentage of total quantity sold, while Central West contributed the least.

Key Findings

- North West is the company's best-performing region.
- 2021 recorded the strongest sales performance.
- Gross profit remains healthy because revenue is significantly higher than the cost of goods.
- Product returns should be reduced to improve overall profitability.
- Recommendations
- Invest more in high-performing regions to sustain growth.
- Develop strategies to improve sales in low-performing regions.
- Reduce product returns by improving product quality and customer service.
- Continue monitoring sales performance using dashboards for better decision-making.

Recommendation

- Invest more in high-performing regions to sustain growth.
- Develop strategies to improve sales in low-performing regions.
- Reduce product returns by improving product quality and customer service.
- Continue monitoring sales performance using dashboards for better decision-making.

Conclusion

The analysis shows that the company achieved strong sales and profitability over the three-year period. With improvements in lower-performing regions and better management of product returns, the business can achieve even greater success in future years.
